

FAMILY PLANNING HEALTH PROFILE WHO AFRICAN REGION 2019

General statistics			Summary FP statistics		
Total population (000's)	2019	1,091,759	Demand satisfied (%)	2019	56
Total fertility rate (births per women)	1988-2018	5	mCPR (%)	2019	24
Adolescent Birth Rate (births per 1000 adolescent females)	2015-2020	102	Unintended pregnancies (000's)	2019	22,689
IMR (deaths per 1000 live births)	2018	42	Unmet need (%)	2019	20
MMR (deaths per 1000 live births)	2017	525	Unsafe abortions averted (000's)	2019	5,377

Definition of Indicators	References
1. mCPR: % of women of reproductive age who are using (or whose partner is using) a modern contraceptive method at a particular point in time.	Indicators 1 and 2 From UN DESA population division 2020 Estimates and projections of family planning indicators (estimates for Sub-Saharan Africa)
2. unmet need: % of fecund women of reproductive age who want no more children or to postpone having the next child, but are not using a contraceptive method, plus women who are currently using a traditional method of family planning.	Indicators 3 From WHO Global Observatory *Disaggregated indicators - median of country values
3. demand satisfied: percentage of women (or their partners) who desire either to have no additional children or to postpone the next child and who are currently using a modern contraceptive method.	Indicators 4 to 8 Median of country values
4. Unintended pregnancies: Nb of pregnancies that occurred at a time when women (and their partners) either did not want additional children or wanted to delay the next birth.	Indicator 9 WHO Global Observatory
5. unsafe abortion: Nb of unsafe abortions that did not occur during a specified reference period as a result of the protection provided by modern contraceptive use during the reference period.	Indicator 10 From UN Inter-agency Group for Mortality Estimation (MMEIG), 2016
6. Facilities stocked out: % of facilities stocked out of each type of contraceptive offered, on the day of assessment.	Indicator 11 Median of country values from UN Inter-agency Group for Child Mortality (IGME), 2016
7. Method availability: % of primary (resp. secondary/tertiary) service delivery points with at least 3 (resp. 5) modern methods of contraception available on day of assessment.	
8. Total fertility rate: Average nb of children a hypothetical cohort of women would have at the end of their reproductive period if they were subject during their whole lives to the fertility rates of a given period and if they were not subject to mortality.	
9. Adolescent birth rate (ABR): Nb of births to adolescent females, aged 15-19 occurring during a given reference period per 1,000 adolescent females.	
10. Maternal mortality ratio (MMR): Annual nb of female deaths from any cause related to or aggravated by pregnancy or its management per 100 000 live births.	
11. Infant mortality rate (IMR): probability of dying between birth and age 1 per 1000 live births.
